

Embyr Technologies Go Style Guide

Matthew Cooper Healy

8 April 2018

Use `gofmt`

Either follow the style accepted by `gofmt` or run `gofmt` prior to pushing any code.

Comments

Comments will follow the Google standard, notably that comments are primarily used inline, rather than in blocks, and are preceded by exactly one space if on the same line as a line of code.

Example:

```
main() int {  
    fmt.Println("Hello, World") // prints "Hello, World" to the console  
    return 0;  
}
```

Note: this is a living document and should be checked regularly for updates.
